

THE ULTIMATE OPERATIONS MANAGEMENT SOFTWARE

APPARATUS CHECKS

Dynamic operations management software simplifies apparatus checks, tracks past check history and enables notifications of upcoming or overdue inspections. A shared checklist library also allows the importing and customization of real checklists used by other departments.

NARCOTICS LOGS

Comprehensive lists of medical supplies, compartment tools and drugs are organized by categories to measure supply levels, track expiration dates and document usage.

EQUIPMENT INSPECTIONS

Digital equipment inspections streamline and maintain routine checks for all equipment types to improve transparency and equipment safety.

SERVICE TICKETS

If an apparatus fails a check or requires routine maintenance, easily generated service tickets communicate necessary repair information such as costs and repair details.

WORK ORDERS

When an apparatus or equipment is out for repair, a built-in workflow tracks their statuses, associated costs and what services are being performed.

VISUAL REPORTS

Visually-driven reports reveal the check steps each engine passes, measure units of engines such as mileage or hours of use and manage the drug log of controlled substances and common medicines.
